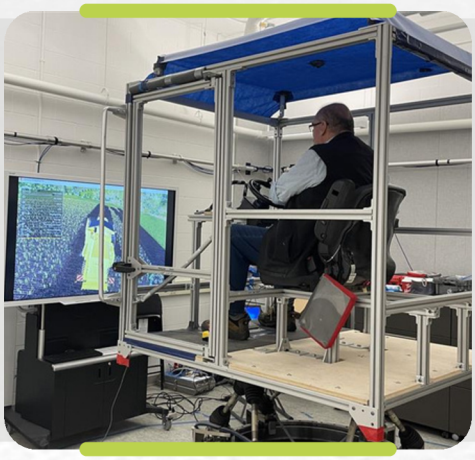
SHAKE THINGS UP!

Participate in our farm safety research!

We are looking for people with a farming background who have no history of work-related pain in their back, neck, or limbs in the past six months to volunteer in our study. This study will look at whether farm vehicle vibrations affect decision-making.

As a Participant, You Will:

- Fill out a questionnaire
- Take part in in-lab vibration testing
  - One session that lasts about three hours
- Come back the next day for follow-up testing
  - Follow-up session lasts about thirty minutes
- We will collect blood and urine samples before and after the vibration testing



As a participant, you will be compensated for your time.
